

## LUMBO THORACIC (LT) - LUMBAR SUPPORT

Indicated where thoracic and lumbar support is needed to improve poor posture and reduce back pain. The muscles in the back are stimulated as they help pull back the scapula and straighten the head and neck, promoting a straight and healthy spine. This light but rigid support is applicable for post-surgical or osteoporotic patients.

The LT Support is 20" high at the spine and is contoured at top and bottom to 8" in front. The back lumbar width is 12".

The padded shoulder straps adjust and secure in front for ease of entry.

Crisscrossing abdominal straps require minimal strength and provide exceptional support.

For the shorter patient, the LT Short features the same features as our regular LumboThoracic but contours to just 6" high in front. It accepts a low-temperature, insulated insert that molds easily, quickly, and comfortably. Order separately.

Can be worn by either men or women.

SIZE	LONG	SHORT	WAIST CIRCUMFERENCE
SMALL	0240 WHI SM	0241 WHI SM	24" - 30"
MEDIUM	0240 WHI MD	0241 WHI MD	32" - 38"
