

## LUMBITRON ELITE DUO SEMI-RIGID LUMBOSACRAL BACK SUPPORT

### Characteristics:

Orthosis made of breathable multi-band material, which provides uniform compression due to its threadless seam technique, avoiding annoying friction and loss of compression on the patient's skin. Reinforced in the lower back region with four preformed steel stays, which are flexible and adaptable. The front part includes 2 flexible stays for improved consistency and abdominal restraint. Its inner part incorporates a foam lumbar pad which provides heat to the area, giving a thermal effect, at the same time as providing selective compression in the lumbar region.

Available in both a Regular and Short version.

### Indications:

- Lumbago.
- Lumbosciatica.
- Degenerative processes.
- Muscle weakness.
- Pre- and post-surgical treatments.
- Spinal disc herniation.
- Spondylolysis and Spondyloarthrosis.
